EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph Lally (No. 38,947) on 14 May 2007.

The application has been amended as follows:

- Claim 1,
 - line 1, deleted "Apparatus" before "comprising", inserted before "comprising", -- An information processor --;
 - line 3, deleted "information" before "processor";
 - line 5, deleted "a" before "processor", inserted before "processor", -- said -
-;
- Claim 2, line 1, deleted "Apparatus" before "according", inserted before "according", -- The information processor --;
- Claim 3, line 1, deleted "Apparatus" before "according", inserted before "according", -- The information processor --;
- Claim 4, line 1, deleted "Apparatus" before "according", inserted before "according", -- The information processor --;
- Claim 9, line 1, deleted "Apparatus" before "according", inserted before "according", -- The information processor --.

Additionally, claim 8 has been amended to read:

Art Unit: 2115

A control circuit for controlling mode selection in an information processor having a normal-operation mode in which coherence control is performed for making data in a cache memory identical to data in a main memory and a power-saving mode in which said coherence control is suppressed to lower the power consumption from power consumption in said normal-operation mode and entering said normal-operation mode when an input/output device accesses said main memory in said power-saving mode, comprising:

a register module for storing mask data for each input/output device, said mask data indicating whether or not an access request signal provided by each of a plurality of input/output devices for accessing said main memory is invalidated;

a masking module for obtaining said access request signal for each input/output device and masking said access request signal with mask data associated with said input/output device and stored in said register module; and

an input module for entering a signal masked by said masking module into a processor to selectively switch the operation mode of said information processor.

The title has been amended to read: INFORMATION PROCESSOR WITH SUPPRESSED CACHE COHERENCE IN LOW POWER MODE.
